L'innovation en Ophtalmologie va bien au-delà des médicaments

Téléchargez l'Application Retina Base pour tablettes tactiles sur l'App Store® ou le Google Play® et découvrez plus de 120 cas cliniques de pathologies rétiniennes rédigés par des experts, disponibles en Français et en Anglais.

- Naviguez à travers l'organisation planétaire des pathologies et cas cliniques.
- Recherchez facilement les clichés grâce au moteur de recherche intuitif et filtrez les résultats par mot-clé, technique d'imagerie et auteur.
- Recevez les notifications dès que de nouveaux cas sont disponibles.

Rendez-vous sur www.viaopta.fr pour découvrir ou redécouvrir tous les services ViaOpta™ dédiés à l'ophtalmologie

Dear EVER members, colleagues and friends,

As President of EVER 2015, I would like to take this opportunity to welcome you again to Nice, France. This pearl on the French Riviera has now been the home of EVER for three years, and, in agreement with your vote, will be that for another four.

EVER continues to be a dynamic, strong organisation with the annual Meeting acting as a conduit for researchers, clinician-scientists and clinicians, as well as industry partners in the field of vision and eye disease to exchange ideas, learn, enthuse and stimulate, with solid science in a relaxed atmosphere and an Old World charming environment.

The latter ensures that the interactions between participants can continue beyond those at the Meeting, in a setting of a historic city with a thriving restaurant scene for all budgets, and good weather. In addition, you may sometimes just want to go for a bit of culture, a shopping spree or absorb some Indian summer sunrays. The Annual EVER Meeting offers all of that.

Over the years in Nice, we have seen a steady rise in the number of participants, which encourages the EVER Board to continue on the same path. A fantastic mix of opinion leaders, basic researchers, clinicians and clinician-scientists from Europe and far beyond, all flock to Nice, to interact, explain and absorb the latest novelties in our field. Strong support from our Industry partners has helped EVER flourish over its history, in particular during the last few years in Nice. Gratitude for their support is abundant.

The Annual EVER Meeting is certainly large enough to have the scientific clout required for an international meeting, but at the same time small enough not to overwhelm and allow one to meet those one really wants to. The Meeting program offers a wide variety of scientific exchange formats in ophthalmology and vision research, and includes plenary lectures by internationally renowned leaders in their fields, special interest symposia and courses by the experts, and free paper and poster sessions to present new results.

I'm very grateful that you are joining us in Nice for the EVER 2015 Meeting, and thank you in advance for sharing your insights, knowledge and new ideas.

Bart P LEROY
President EVER 2015

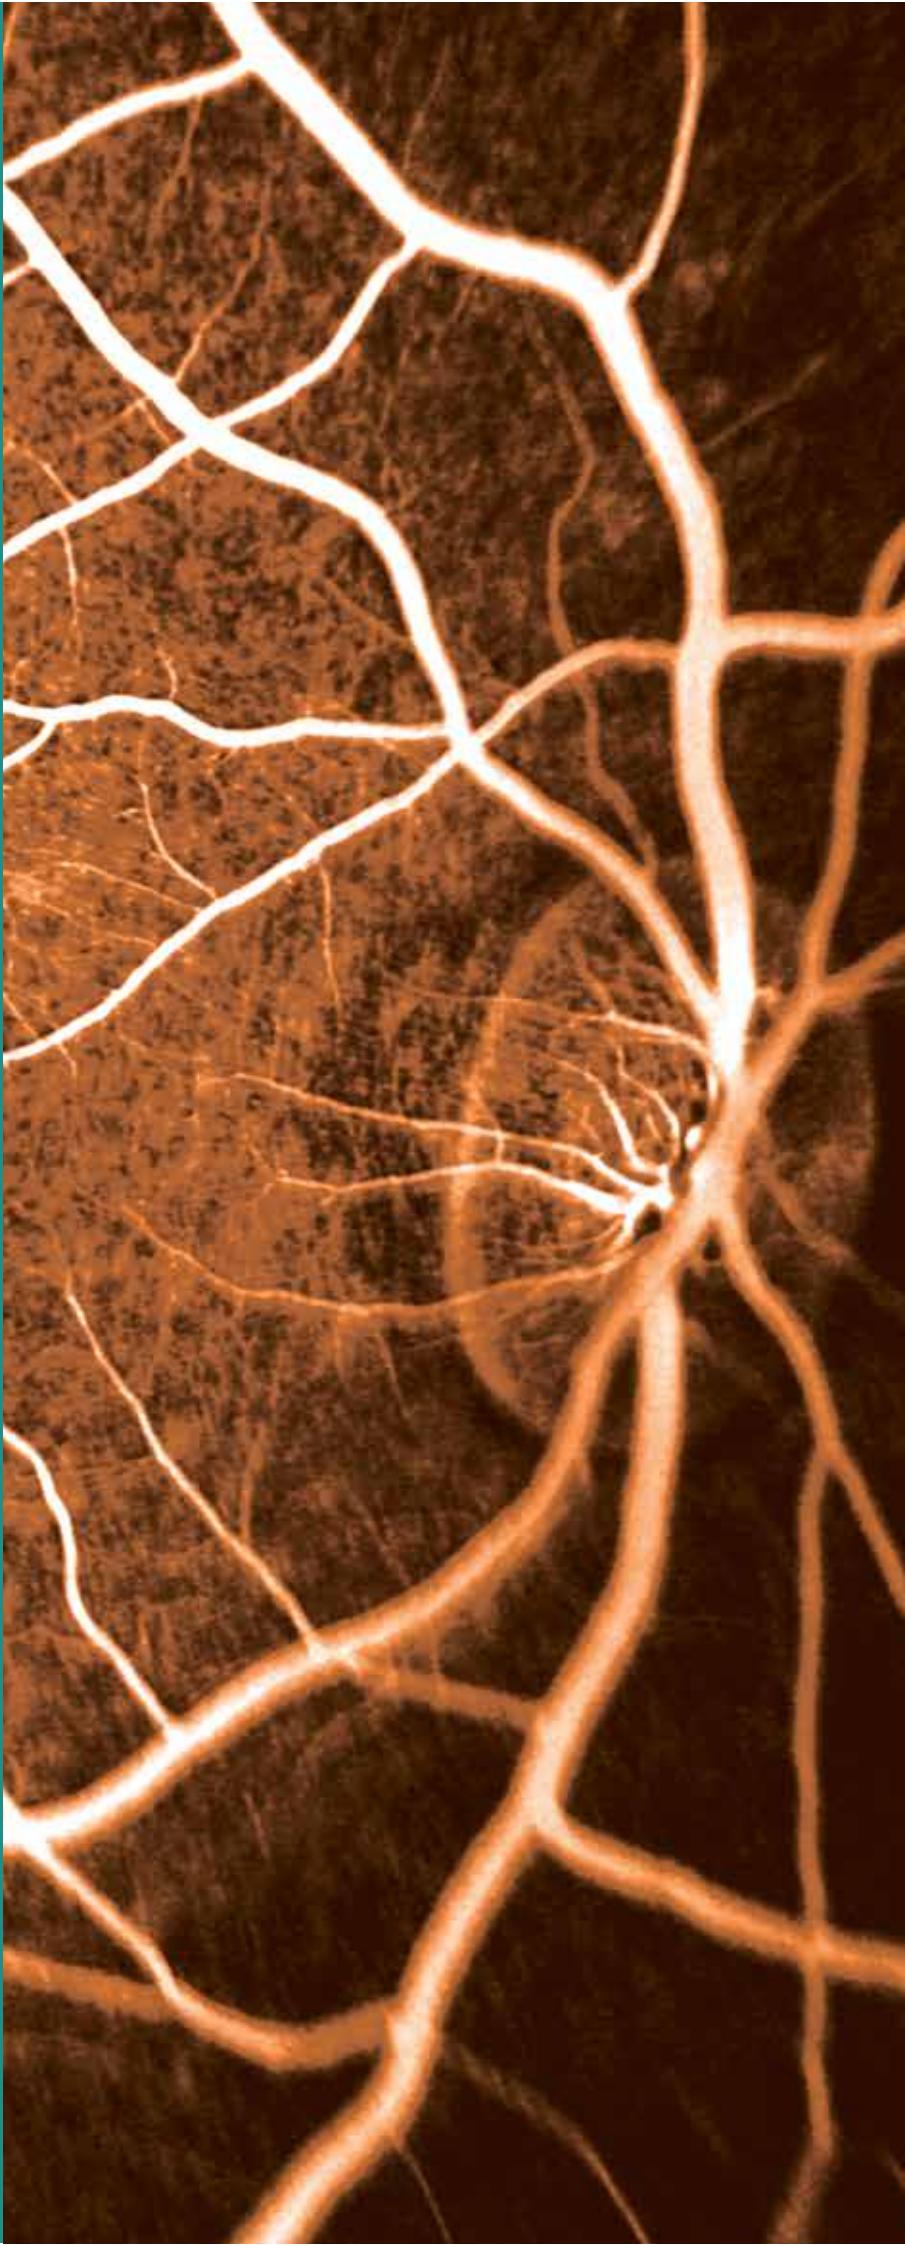

YOUR VISION, OUR SITE

We'll see you through your drug development every step of the way, supporting your ocular research with scientific excellence and a unique suite of services:

- Laboratory support
- Custom disease models
- Specialized administration
- Advanced imaging
- Model-based ocular surgery

Visit us at our booth to meet one of our scientists, or find out more at www.criver.com/ever.

The European Association for Vision and Eye Research, EVER, is a non-profit organisation. The aims of the association are to encourage research and the dissemination of knowledge concerning the eye and vision by means of meetings, publications and exchange of information. EVER is the leading ophthalmological research association in Europe which covers all areas of ophthalmology and the visual sciences. It provides an umbrella for other ophthalmological societies to meet during its annual congress.

Membership

EVER currently has members from 50 countries all over the world and represented by 11 scientific sections. Membership is open to individuals of any nationality, engaging in or with an interest in ophthalmic and vision research. Applications for membership - available on www.ever.be - may be submitted at any time, membership is on calendar year basis and starts on January 1. Every member must select one of the 11 Scientific Sections that best represents his or her primary area of interest.

The benefits of EVER membership are:

- significantly reduced registration fees for annual meeting
- submission of abstracts at annual meeting
- organizing Special Interest Symposia (SIS) and Courses
- free electronic subscription to the EVER journal, *Acta Ophthalmologica* (IF 2.844)
- voting rights for the election of the Board Members
- travel grants and poster prizes
- quarterly E-Newsletter

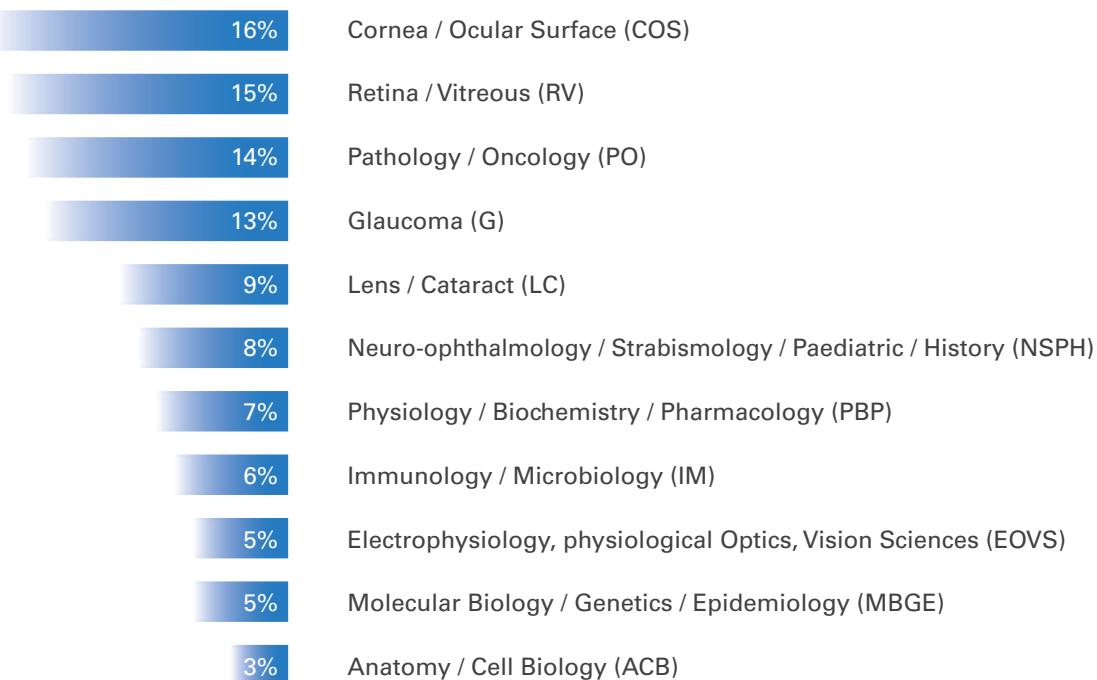

Elections 2015

In 2015 new representatives of the scientific sections

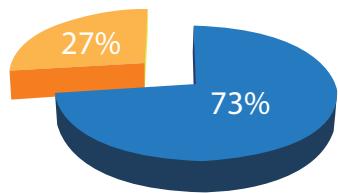

- **NSPH** Neuro-ophthalmology / Strabismology / Paediatric Ophthalmology / History of Ophthalmology
- **PO** Pathology / Oncology

will be elected through electronic voting. Voting 2015 will close on October 8, midnight. The result of the elections will be announced at the General Assembly on Friday 9 October 2015, 17:55 -18:30.

Affiliation to scientific sections

Congress participants:

Clinical with or without research: 73 %

Research only: 27 %

EVER**European Association for Vision and Eye Research**www.ever.be

We aim to encourage research and the dissemination of knowledge concerning the eye and vision by means of meetings, publications and exchange of information. EVER is the leading ophthalmological research association in Europe which covers all areas of ophthalmology and the visual sciences. EVER currently has members from over 50 countries and is represented by 11 scientific sections. One of the main activities of EVER is the organizing of a high quality research meeting every October at a location chosen for its access and its agreeable autumn climate. EVER collaborates closely with other societies and encourages them to convene annually with EVER.

EVER f
EVER Foundationwww.ever-f.eu

In 2010, the EVER Foundation was created to raise money to organize EVER f Research Fellowships to offer to young ophthalmologists or young vision scientists, especially from Eastern Europe or from developing countries outside Europe, the opportunity to gain experience in laboratory techniques and scientific research in leading European Departments for Vision and Eye Research. The duration of the fellowship is limited to 6 months.

Fellowships 2015:

1. Dr. Sepehr FEIZI, Iran - host institute : Queens Medical Centre, Nottingham, UK
2. Dr. Sabina SAPETA, Poland - host institute : Medical University of Vienna, Austria

Fellowships 2014:

1. Dr. Ganne PRATYUSHA, India - host institute : Vision Lab, Cardiff Centre for Vision Sciences, Cardiff University, UK
2. Dr. Mohamed Shafik Mohamed ELALFY, Egypt - host institute : Queens Medical Centre, Nottingham, UK

Fellowships 2013:

1. Dr. Reka ALBERT, Hungary - host institute: Queens Medical Centre, Nottingham, UK
2. Dr. Minika JASIELSKA, Poland - host institute: Department of Experimental Ophthalmology at the Charite University Medicine in Berlin, Germany

Acta Ophthalmologica
EVER's journaleu.wiley.comActa
Ophthalmologica

Acta Ophthalmologica is the official scientific publication of the European Association for Vision and Eye Research (EVER) and of the five Nordic ophthalmological societies. Acta Ophthalmologica publishes clinical and experimental original articles, reviews, editorials, educational photo essays (Diagnosis and Therapy in Ophthalmology), case reports and case series, letters to the editor and doctoral theses. (IF 2.844)

Venue

EVER 2015 will be held at the Acropolis Convention Center in Nice, France

⇒ www.nice-acropolis.com

The scientific programme of the EVER congress starts on Wednesday, October 7 at 12:00 and concludes on Saturday, October 10 at 16:00.

Registration

Everyone attending the scientific sessions - whether or not an EVER member - must register and pay the registration fee. Onsite registration starts on Wednesday, Oct 7, 9:00.

Please note that:

- being or becoming an EVER member – or having an abstract accepted – does not imply that you are registered
- if you register as a member-in-training, you need to prove your traineeship with a document signed by the Head of your Department
- if you register as an Eye-care, Technician or Nurse, you need to prove your status with a document signed by the Head of your Department

Registration fees on-site

	EUR	EUR
EVER member / Course invited speakers	455	390 *
Member-in-training	250	200 *
Non-member	800	645 *
Non-member-in-training	400	310 *
Eye-Care / Technician / Nurse	200	180 *
Congress Dinner (member / non-member)	90	90
Congress Dinner (in training)	60	60

* Citizens of these listed countries only:
Albania, Algeria, Armenia, Belarus,
Bosnia and Herzegovina, Congo, Egypt,
Georgia, Iran, Libya, Macedonia, Moldova,
Montenegro, Morocco, Ouzbekistan,
Pakistan, Serbia, Tunesia, Ukraine

Cancellation policy

Refunds - up to 75% of the advance registration fee will be granted for cancellation received in writing prior to Sept 15, 2015. Refunds will not be granted for later cancellations or no-shows.

Website

The EVER website www.ever.be has a central role in the EVER organisation. At this website, you can

- obtain up-to-date information about the scientific programme and the EVER 2015 meeting and view the status (session, hour, place) of your presentation
- pay on-line and print your invoice
- access general information about EVER
- access Acta Ophthalmologica, the EVER journal
- cast your vote for officers
- print CME certificate after each congress you attended

Housing

ADVANCEDFAIR

AdvancedFair has negotiated special rates for accommodation in several categories of hotels.
⇒ www.advancedfair.com

Travel

The Nice Côte d'Azur Airport is located at 7 km from the city centre. The tramway line connects most of the hotels with the Acropolis Convention Center.

Weather

In Nice there is an average 6 hours of sunshine/day during October so it remains warm and pleasant. It is a perfect time of year to go and explore the city and discover for yourself the many fantastic historic and cultural landmarks Nice has. There are also a variety of museums and art galleries that can be a worthwhile way to while away a day in the city.

Welcome reception

The Welcome reception is open for all participants and exhibitors.

- Wednesday 19:30 - 21:00 in the Exhibition area, Acropolis Convention Center

Congress dinner

Registration required.
Members / non-members: 90 EUR - Members in training: 60 EUR
Space is limited.

- Friday 20:00 in Hotel NEGRESCO - 37, promenade des Anglais, Nice

Coffee / tea / refreshments

Included in the registration fee are the coffee / tea and soft drinks offered throughout the whole meeting. In addition coffee & croissants will be served early morning.

Internet access

Wi-Fi internet access is available in the Convention Center.

Photographs

It is strictly forbidden to take photographs or videos of the presentations in all lecture halls.

Publication of the abstracts

The abstracts of the EVER 2015 congress are published on-line in a special issue of Acta Ophthalmologica, the EVER journal. Access for members-only through EVER homepage.

Section Business Meetings

EVER Section Business Meetings of the scientific sections
Friday, 15:45 - 16:15

- ACB Gallieni 5
- COS Rhodes 2
- EOVS Rhodes 1
- G Rhodes 1
- IM Rhodes 4
- LC Hermes
- MBGE Gallieni 1 & 2
- NSHP Rhodes 2
- PO Rhodes 3
- PBP Rhodes 3
- RV Hermes

The sections

- IM - Immunology / Microbiology
- PBP - Physiology / Biochemistry / Pharmacology

will nominate at least 2 candidates for the succession of their representatives in the Board of EVER for elections in 2016.

Agenda see page 107

EVER General Assembly

Friday, 17:55 - 18:30 in room Hermes
Agenda see pages 113

Prize award ceremony and conclusion of the congress

Saturday, 15:30 - 16:00 in room Hermes
Agenda see page 138

NEW!

Women 4 EVER

Wednesday 7 October 2015 from 17:00 to 18:30

Women 4 EVER wishes to assist women in developing tools for career advancement and to foster gender equality in ophthalmology and visual science. We encourage mentorship, collaboration, and communication. In this informal and open session, we invite all interested members of EVER to come and meet colleagues, share experiences and ask for advice. It is also a venue where ideas about gender-based studies in ophthalmology may be developed. *See page 34.*

NEW!

Coffee with the Prof

Thursday, October 8 2015 from 15:15 - 16:00 in poster area

In an initiative to encourage dialogue amongst speakers and EVER members, we have launched a 45 minute session called "Coffee with the Prof". This will be a table of 6-8 "guests" at a table headed by one of the EVER speakers.

The idea is to provide a casual yet personal venue where colleagues, in particular the younger faction, can share comments and ideas with an expert.

This new initiative is scheduled on Thursday, Oct 8, 15:15 - 16:00 in the poster area. *See page 62.*

No-shows

Please note that any first author, whose paper or poster has been accepted, will be prohibited from presenting papers at EVER for the next two years if a valid reason is not sent to the EVER office in writing.

CME - Continued Medical Education credits

The European Accreditation Council for Continuing Medical Education Institution of the UEMS, EACCME has granted 22 European CME credits (ECMEC) to the EVER 2015 congress on Oct 7 - 10 in Nice, France. CME credit certificates can be printed from the EVER website after the congress.

Liability

The organisers cannot accept liability for personal accidents, loss of or damage to private property of participants and accompanying persons either during, or directly arising from the Meeting. Participants must make their own arrangements with respect to health and travel insurance.

EVER 2015 congress App

All congress information in a nutshell:

**EVER section travel grants**

We are pleased to announce that the following 14 members have received an EVER section travel grant of 750 EUR each:

- **ACB - Jong Hwa JUN - South Korea**
4171 - MicroRNA-124 Regulates Transforming Growth Factor β1-induced Epithelial-Mesenchymal Transition in the Retinal Pigment Epithelium by Down-regulating Expression of the RhoG
- **COS - Lana FARAJ - United Kingdom**
1344 - In-vitro anti angiogenic effects of cryo-preserved amniotic membrane
- **COS - Zhiguo HE - France**
2431 - Mass production of high quality corneal endothelial cells from old donors
- **EOVS - Naznin MIRZA - United Kingdom**
F050 - Testing of an automated tablet-based method for the determination of low contrast near visual acuity in ophthalmic patients
- **G - Camilla SANDBERG MELIN - Sweden**
2544 - Pigment epithelium central limit - Inner limit of the retina, Minimal Distance, PIMD, a morphometrical variable for glaucoma follow-up
- **G - Seskoati PRAYITNANINGSIH - Indonesia**
3571 - The Effect of Hypertension on Intraocular Pressure and Apoptosis of Retinal Ganglion Cell Through ET-1 Signaling Pathway Activation in Trabecular Meshwork of Hypertension Rat Model
- **IM - Micheal O'ROURKE - Ireland**
2572 - The role of dendritic cells in non-infectious anterior uveitis
- **LC - Erin THORNELL - Australia**
3251 - αB-Crystallin Phosphorylation as a Precursor to Cataractogenesis
- **MBGE - Cerys EVANS - United Kingdom**
3163 - Investigation of genotype-phenotype correlation of TGFBI mutations reveals c.1868G>A; p.(Gly623Asp) is associated with a variable clinical phenotype, including epithelial basement membrane dystrophy
- **NSPH - Kristina IRSCH - France**
3454 - The influence of lingering fusional adaptation on the Bielschowsky head tilt test in superior or oblique paresis
- **PBP - Madhu NATH - India**
F045 - Angiotensin Receptor Blockade in Retinopathy of Prematurity: An Experimental Study
- **PO - Martina ANGI - United Kingdom**
4145 - Proteomic analysis of the uveal melanoma (UM) secretome reveals novel insights and potential biomarkers
- **RV - Elizabeth STEWART - United Kingdom**
S054 - Dexamethasone Reverses the Effects of High Glucose on Human Retinal Endothelial Cells In Vitro
- **RV - Robert SCOTT - United Kingdom**
4272 - Cell Penetrating Peptide Constructs: A novel Drug Delivery to the Eye

EVER Poster Prizes

Poster prizes of 500 EUR will be awarded for the best posters across all sections.

The winners will be chosen by the poster moderators and will be announced in the Prize award ceremony on Saturday, 15:30 - 16:00 in room Hermes. No prize will be given after the congress.

EVER Award Ceremony 2014

quartett diagnostica Research Award

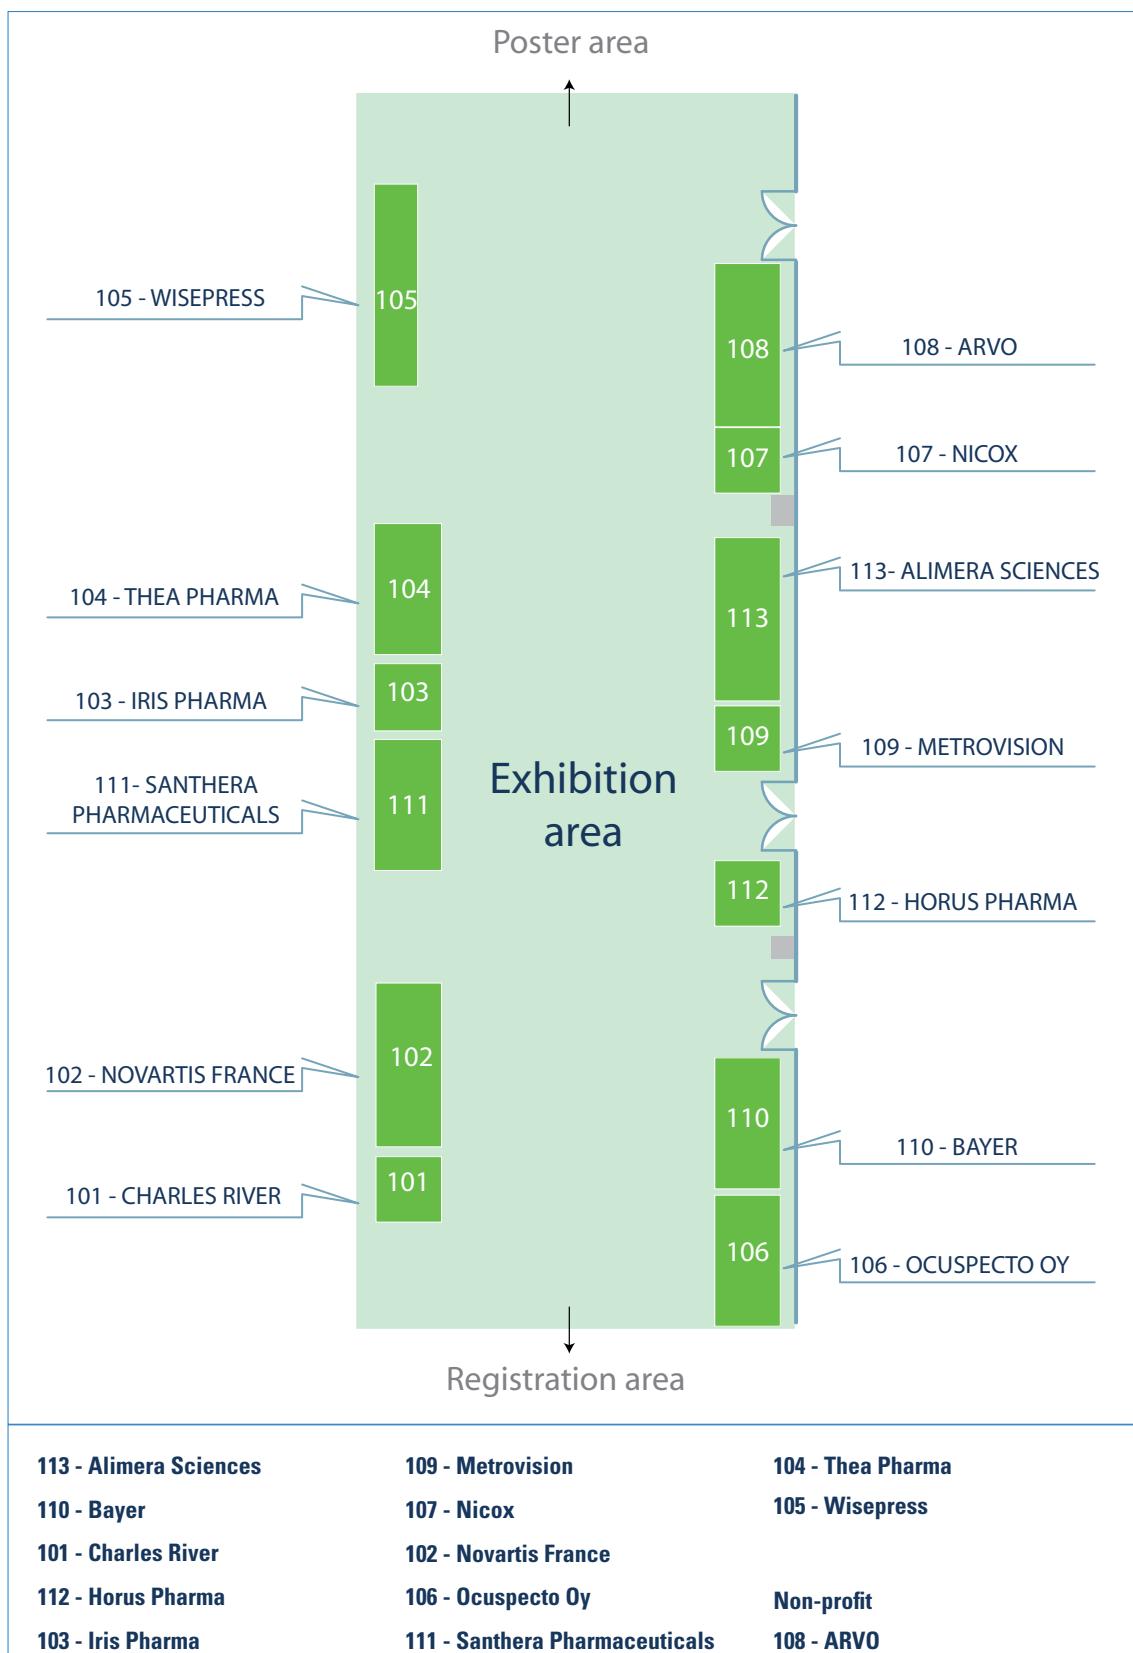

3 grants supported by quartett for best paper in COS

- Translational Research Award
- Basic Science Research Award
- Clinical Research Award

The papers will be chosen during the congress and the grants will be handed over during quartett diagnostica Research Award Session on Friday, 9 October 2015 from 13:30 - 15:00 in room Rhodes 2.

Acropolis Convention Center, 2nd floor

Exhibitors

**ARVO****Association for Research in Vision and Ophthalmology**www.arvo.org

In many senses the counterpart of EVER in North America, the purposes of ARVO are to encourage and assist research, training, publication, and dissemination of knowledge in vision and ophthalmology. EVER and ARVO are collaborating in many fields, including an ARVO symposium held every year in EVER and an EVER symposium held in ARVO since 2005. *See page 128.*

**EBO****European Board of Ophthalmology**ebo-online.org

The European Board was founded in 1992 to guarantee the highest standards of care in ophthalmology in the countries of the European Union by ensuring that the training is raised to the best possible level.

It makes recommendations regarding the standards and syllabus for training ophthalmologists, assesses the content and quality of training by site visits and the annual EBO Diploma Examination, facilitates the exchange of trainees and teachers, and promotes CME in ophthalmology. EBO works under the Section of Ophthalmology of the European Union of Medical Specialists (UEMS). Since 2007, EBO has organized review courses open to all delegates during the EVER congress.

See pages 27, 31.

**EUPO****European University Professors of Ophthalmology**www.eupo.eu

EUPO is the organizer of the annual structured subspecialty course for residents in training in Europe since 1988. Most of the ophthalmology curriculum is covered over a 4 year period to allow residents to get an overview of theoretical knowledge during their residency rotation. EUPO courses are held in different places in Europe. The EUPO 2016 course on Neuro-ophthalmology and Strabismus will be organized in conjunction with the EVER congress in Nice, France.

**FAN****European Fluorescein Angiography Club**www.fan-int.org

The FAN Club started as a friendly reunion of pioneers of Medical Retina, in the early days of fluorescein angiography and lasercoagulation of the retina. The FAN received a semi-official status, being invited to organize a session of Medical Retina Case Presentations during large meetings in Ophthalmology. The Club runs itself without official status, there is no membership fee, and no registration fee for the meetings. Upcoming meetings are decided within the group, trying to change the location from country to country, and offering all members the opportunity to organize at least once a full day reunion in their hospital. Since 2012, FAN has organised joint meetings open to all delegates during the EVER congress. *See page 94.*

**FRO****Belgian Fund for Research in Ophthalmology**www.fro-online.org

The aim of the FRO association is to stimulate research in ophthalmology and in visual function by awarding grants to research projects carried out under order of Belgian institutions. The FRO candidates have presented their research work to an international jury during the EVER congress since 2002. *See pages 130, 136.*

**GOA****Groupe Ophtalmo Allergo**

In ocular surface pathologies the cooperation between clinical ophthalmology and allergology created the GOA. The GOA allowed the development of clinical research in ocular allergic disease. Vernal keratoconjunctivitis and atopic keratoconjunctivitis create severe ocular impairment that must be recognized and treated. *See page 85.*

**OOG****The Ophthalmic Oncology Group**www.oog.eu

OOG is an independent scientific workgroup devoted to basic and clinical ophthalmic oncology. It has convened with EVER since 1998. The aims of the OOG are to improve the practice of ophthalmic oncology in Europe, develop internet-based databases to share scientific information, organise multicenter studies and quality control studies, and meetings and other activities with the aim of improving the treatment of eye tumours and knowledge about them. OOG encourages all EVER delegates to take part in its sessions. *See pages 117, 129 and 135.*

EVER 2015

Wednesday, Oct 7

12:00 - 13:30 | HERMES

RV: Diabetic retinopathy: A neurodegenerative disease

Intermediate

Diabetic retinopathy is the first cause of visual impairment and blindness in the adult working-age population. This complication of diabetes mellitus has been considered primarily a retinal microvascular disorder nevertheless, some recent studies have demonstrated that retinal neurodegeneration is present even before the development of clinically detectable microvascular damage. Early recognition of retinal changes in diabetic patients is essential in the prevention of vision loss. Recently, optical coherence tomography (OCT) has been introduced into clinical practice as one method to visualize the retina. It allowed to performed quantitative and qualitative measurements of different retinal layers. Considering the impact of an early detection of retinopathy diabetic, the idea behind the Course is to try to sum up the data of what the recognition of the neurodegeneration is an important target worth looking from a clinical point of view.

FERREIRA J , VUJOSEVIC S

1111	12:00	Diabetic retinopathy - pathophysiology <i>MARQUES-NEVES C - Lisbon</i>
1112	12:22	Neurodegeneration and vascular impairment in the eye of diabetic patients <i>SIMO R , Hernández C - Barcelona</i>
1113	12:44	The changes of the retinal layers in diabetic patients without retinopathy <i>FERREIRA J , Costa L , Proença R , Vicente A , Cunha J P , Abegão L P - Lisbon</i>
1114	13:06	The changes of the retinal layers in diabetic patients with retinopathy <i>VUJOSEVIC S , Bini S , Berton M , Midena G , Martini F , Midena E - Padova</i>

12:00 - 13:30 | RHODES 1

G: Virtual review: Setting new standards in glaucoma care

Glaucoma specialists are increasingly using technology to support follow up care for low risk patients and screen new referrals to maximise the use of existing resources. We will explore various systems of virtual review and hear first hand the experiences of pioneers and users of the technology.

CRAWLEY L , AHMED F

1121	12:00	Virtual review- in glaucoma and beyond <i>CRAWLEY L - London</i>
1122 *	12:22	Managing a 100 patient glaucoma clinic <i>AHMED F - London</i>
1123	12:44	Early adopters- ahead of the curve and lessons learned <i>LONGSTAFF S - Sheffield</i>
1124 *	13:06	New software for an old problem <i>DIAMOND J - Bristol</i>

12:00 - 13:30 | RHODES 2

IM: EBO course: Intraocular inflammation and infection (Part 1)**Intermediate**

The aim of this course is to review major topics of intraocular inflammation and infection. MCQs will be proposed online before the course to evaluate the basic knowledge of the participants. The test will be followed by 6 consecutive general presentations for the understanding of different uveitis features. The course will be interactive allowing general discussion and the participation of the audience. MCQs will be discussed during each presentation. At the end of this course, participants will be prepared for the MCQ part of the EBO examination in uveitis.

BODAGHI B , HERBORT CP

1131	12:00	Pathophysiology of uveitis <i>DICK A - Bristol</i>
1132	12:15	Classification of uveitis <i>ANDROUDI S - Thessaloniki</i>

COS: How to perform deep anterior lamellar keratoplasty**Intermediate**

Deep anterior lamellar keratoplasty (DALK) is the preferred transplant option for corneal stromal pathology. This course will aim as beginners and intermediate level surgeons taking them in a step by step manner through the indications, case selection for beginners, different techniques with emphasis on the most popular big bubble technique, what deviations from the 'routine' can occur and how to recognise and address them and the post-operative management and care required for best visual outcome including how to recognise rejection in DALK grafts. At the end, at least 20-30 minutes will be devoted to interaction with the course delegates to answer specific questions they have related to their technique(s) and problems they have encountered. Besides power point and videos we will also make use of flip chart or blackboard to make drawings to explain fine details as and when required. All delegates will be given a pdf of the powerpoint presentations and some illustrative and instructional videos as part of the package offered on behalf of EVER.

DUA H S

1141	12:00	DALK Techniques from manual to femtolaser <i>NUBILE M , Salgari N , De Nicola C , Mastropasqua L - Chieti</i>
1142	12:18	Big Bubble DALK: The ladder to success, step by step <i>KATAMISHT - Cairo</i>
1143 *	12:36	DALK: Intraoperative pitfalls and how to manage them <i>DUA H S - Nottingham</i>
1144	12:54	DALK: Post operative management <i>SAID D - Maadi,Cairo</i>
1145 *	13:12	Discussion, Questions and Answers <i>DUA H S - Nottingham</i>

12:00 - 13:30 | RHODES 4

NSPH: Papilloedema and its Mimics: What's new in pseudotumor cerebri syndrome?

Intermediate

This course will cover 3 areas:

- The differential diagnosis of papilloedema
- The work up of the patient with suspected pseudotumor cerebri syndrome
- The follow-up and decision making on treatment choices of the patient with established pseudotumor cerebri syndrome

KAWASAKI A , PARSA C**1151 *** 12:00 Differential diagnosis of papilloedema
*KAWASAKI A - Lausanne***1152** 12:30 Work up of the patient with suspected pseudotumor cerebri syndrome
*PARSA C - Paris***1153** 13:00 Follow-up and decision making on treatment choices of the patient with established pseudotumor cerebri syndrome
PARSA C - Paris

13:30 - 15:00 | HERMES

RV: Macular hole surgery : New facts and tips for a successful result**Advanced**

We are aiming to present new pathophysiological and clinical facts regarding macular hole and give tips in order to perform safer and affective surgery. Expert speakers will present their views in different subjects of macular hole problem. They will present the use of novel advance technology in practice. There will also be panel discussion for the controversial issues of the condition in order to set guidelines for treatment and approach.

PAPPAS G

1211	13:30	Pathophysiology of macular hole formation <i>STAPPLERT - Liverpool</i>
1212	13:48	Macular hole peeling <i>FERRARA V - Borgomanero</i>
1213	14:06	Posturing or not <i>SIMCOCK P - Exeter</i>
1214	14:24	Myopic macular holes <i>MURA M - Amsterdam</i>
1215	14:42	Partial thickness Macular holes and pharmaceutical treatment of FTMH <i>POURNARAS JA - Lausanne</i>

13:30 - 15:00 | RHODES 1

PO: Mistakes in the diagnosis of fundus tumors**Intermediate**

This course will describe the diagnosis and management of fundus tumors insisting on the main difficulties: tumors developing in children, problems with the practical attitude in front of a suspicious choroidal naevus, difficulties in the diagnosis of achromic tumors, special problem encountered in the diagnosis of intraocular lymphomas and for all these difficult cases the indications and results of the different imaging tools.

DESJARDINS L , ZOGRAFOS L

1221	13:30	Mistakes in the diagnosis of children intraocular tumors <i>CASSOUX N - Paris</i>
1222	13:48	Suspicious choroidal naevi: when to observe when to treat <i>KIVELÄ T - Helsinki</i>
1223	14:06	Difficulties in the diagnosis of achromic and hemorrhagic lesions <i>DESJARDINS L - Paris</i>
1224	14:24	Problems in the diagnosis of intraocular lymphoma <i>CASSOUX N - Paris</i>
1225	14:42	Indications and interpretations of various imaging techniques <i>ZOGRAFOS L - Lausanne</i>

13:30 - 15:00 | RHODES 2

IM: EBO course: Intraocular inflammation and infection (Part 2)

Intermediate

The first part on general aspects of uveitis will be followed by case presentations in different basic or more challenging situations. Important points will be discussed during each practical situation. The course will be interactive allowing general discussion and the participation of the audience. It will be intermediate and present entities that are frequently observed in routine. At the end of this course, participants will be prepared for the viva voce part of the EBO examination in uveitis.

Women 4 EVER

Women 4 EVER wishes to assist women in developing tools for career advancement and to foster gender equality in ophthalmology and visual science. We encourage mentorship, collaboration, and communication. In this informal and open session, we invite all interested members of EVER to come and meet colleagues, share experiences and ask for advice. It is also a venue where ideas about gender-based studies in ophthalmology may be developed.

G: OCT in glaucoma: Clinical and experimental applications

Optical Coherence Tomography has a leading role in glaucoma management. Hardware and software innovations have given the possibility of studying structures previously inaccessible. Novel objective assessments of structural abnormalities could lead to a change in current diagnostic paradigms. One of the objectives of this SIS is to discuss how to establish new OCT parameters for clinical practice. After diagnosis, robust follow-up methods are essential. Current OCT instruments are equipped with useful progression analysis software which have moderate capability of discrimination between age-related changes, instrument's intrinsic noise, and pathological changes. A second objective of this SIS is to discuss the latest novelties in assessing glaucoma progression with OCT. Due to their accessibility and usefulness, animal models of glaucoma are playing a major role in understanding some of the underlying causes of glaucoma. Optical coherence tomography has been used extensively in animal models of glaucoma and has given the exceptional advantage of longitudinal in-vivo assessments of the natural history of the disease. The third objective of this SIS is to discuss the current applications of OCT in animal models of glaucoma.

How to publish - hints and "tricks".....

Beginner

How to get your research published? Pleyer U, Dua H, Kivelä T, Stefánsson E The goal of this session will be to provide some "keys" to write a high quality paper that will help to transform your ideas and findings into a research article. The panelists will discuss major aspects of the editorial process including basic decisions. We will raise the discussion on issues like: How to choose a journal? How to organize your paper? What are the characteristics of a good manuscript? How to interpret the letter from the editor? How to write a good reply to the reviewers? What to do when your paper is rejected? When can it be appropriate to request a reevaluation of a rejected paper? How to keep your work published – do we have to expect the unexpected....? Most important: The personal view from an authors and editors perspective will be given in a vivid discussion with the participants.

PLEYER U

1351	17:00	Reviewer - friend or foe? <i>PLEYER U - Berlin</i>
1352	17:22	What do we need... <i>DUA H S - Nottingham</i>
1353	17:44	How to keep your research published <i>KIVELÄ T - Helsinki</i>
1354	18:06	Ingredients of a good paper... <i>STEFANSSON E - Reykjavik</i>

17:00 - 18:30 | GALLIENI 1+2

LC: But doctor, will this IOL last my lifetime?

Intraocular lenses were first successfully introduced in cataract surgery in 1950. Initial lenses were plagued by design issues and clinical problems including uveitis, glaucoma and hyphaema. Current lenses are considered to be effective and safe, but is this really the case? This course will review methods of evaluation of IOL biomaterials and contemporary issues that have been identified with lenses.

GRZYBOWSKI A , BEIKO G

PBP: Retinal and choroidal blood flow and oxygenation

Changes in retinal or choroidal blood flow/oxygenation have been found in several eye diseases. In some diseases, the change may be a primary event in the pathogenesis. In other diseases, the change in blood flow/oxygenation may be a secondary response to other processes, such as tissue atrophy. The technology for non-invasive measurements of blood flow and oxygenation is continuously improving and ongoing studies may help us better understand the diseases in question as well as allowing us to objectively measure their progression. This SIS will address the general physiology of blood flow and oxygenation of the retina and choroid and how these parameters change in ischemic and atrophic diseases as well as how the changes can be measured.

HARDARSON S , SIN M

European Ophthalmology Heritage Lecture*Introduction by Marcela VOTRUBA***Visual impairment in opera characters**

AYDIN P - Ankara

Summary:

Opera brings the work of singers and musicians together in a theatrical pageant of musical colour and dramatic art. The librettists who devise the stories in works of opera have variously used characters with eye diseases or blindness as major or minor characters in the plots of these stories. This talk will present an array of those operatic characters, along with the possible cause or diagnosis of their eye problems, and will explore the roles which they play in the operas in which they appear, along with their dramatic significance in the flow and resolution of the plot.

Award of the EVER Certificate of Honour

Biography Pinar Aydin O'Dwyer:

Award of the EVER Certificate of Honour Prof Aydin O'Dwyer, completed her ophthalmology training in Turkey and founded the Baskent University Ophthalmology Department, Ankara. She serves as: member of Academia Ophthalmologica Internationalis (AOI, chair LVI), member of the Board of Trustees, Head of the Ethics Committee, member of Eye Care Delivery Committee, member of the Examinations Committee and member of the Fellowships Committee of the International Council of Ophthalmology (ICO). She has served as the past treasurer and Neuro-ophthalmology section program officer of the European Association for Vision and Eye Research (EVER), and the immediate past treasurer of the European Neuro-ophthalmology Society (EUNOS). Author of some 200 scientific publications and editor of 28 books on ophthalmology in Turkish, she has been managing editor and editorial board member on several ophthalmic journals and has given many conferences and courses internationally. Her main interests include neuro-ophthalmology and coaching young academicians, particularly integrating local perspectives into an international approach recognizing cultural distinctiveness. She likewise aims to promote consensus and fellowship through art and music by her presentations on 'Ophthalmology in Art', and the pursuit of her hobbies of playing flute and cello, dancing ballet and writing opera critics. She has two published books on arts: The Book of Ballet (2012) and The Book of Opera (2015).

Keynote Lecture by Brenda GALLIE

Introduction by Laurence DESJARDIN

Rare retinoblastoma: a goldmine for discovery of fundamental principles of biology and healthcare

GALLIE B - Toronto, Ontario

Summary:

Study of retinoblastoma, a rare eye cancer in children, revealed the essential genetic basis of cancer and delivered personalized medicine for families. Where awareness and resources are available, 98% of children survive retinoblastoma. Next big impact will be the unique opportunity to conduct clinical trials of molecular retinoblastoma prevention trials. However, globally 70% of children with retinoblastoma still die. To address this disparity, One Retinoblastoma World, using a "constellation model" of collaboration, has emerged with multiple innovative partnerships. Ongoing studies map (www.1rbw.org) centres and link to a global learning health system, directly providing evidence from the bedside to optimize care of each newly diagnosed child. Retinoblastoma will become a "Zero Death" cancer.

Award of the EVER Certificate of Honour

Biography Brenda Gallie:

Dr. Brenda Gallie is Director of the Retinoblastoma Program at SickKids Hospital, Professor of Ophthalmology, Molecular Genetics, and Medical Biophysics, University of Toronto, and Senior Scientist at the Princess Margaret Cancer Centre, University Health Network. Dr. Gallie received the Order of Ontario for implementing genetic knowledge in care of children with retinoblastoma.

G: All you ever wanted to know about the EGS!

The European Glaucoma Society stands for Innovation, Education and Communication in the field of glaucoma. Indeed the Society offers a wide range of educational opportunities, such as various publications including the EGS Guidelines and several books, educational videos, monthly clinical Tips and Journal Club items, but also Fellowship programs and Travel Grants. An overview of these educational opportunities will be provided. In 2014, an updated version of the EGS Guidelines was published, which is now freely downloadable from the EGS website. The highlights of the EGS Guidelines will be summarized during this SIS. Moreover, the EGS closely collaborates with the European Board of Ophthalmology (EBO). In a joint effort, an EGS-EBO subspecialty diploma was developed. The required curriculum and practical aspects of the examination will be summarized.

PBP: Ultrasound course

Intermediate

Ophthalmic ultrasound is an important clinical tool for the characterization of intraocular and orbital pathology. A- and B-scan contact and immersion techniques which are widely used for the characterization of intraocular and orbital pathology. The physical principle underlying ultrasound is the generation of sound waves at MHz frequencies and its reflection by tissue interfaces. The present course first gives an introduction into ultrasound technology and summarizes new developments in the field. The next talk will deal with high-frequency ultrasound and its ability for the diagnosis of anterior segment disease. Another presentation will focus on the use of ultrasound in the diagnosis of orbital disease. A final talk will discuss Doppler ultrasound techniques and their ability to assess ocular blood flow.

8:00 - 9:30 | RHODES 3

PBP: Relationship between retinal neurons, glia and blood vessels

The coupling between blood flow and neuronal function is a fundamental mechanism for the central nervous system homeostasis. It has recently been shown that also in the human retina neurons, glia cells and blood vessels are tightly coupled. As such, increased neural activity in the retina leads to a subsequent increase in blood flow in the optic nerve head as well as in the retinal vasculature. It is now understood that also in the human retina, the coupling between neural activity and blood flow is an essential physiological mechanism to assure constant supply of the ocular tissue with oxygen and nutrients. This SIS aims to summarize our current knowledge on the physiological importance of the relationship between neurons, glia cells and blood vessels. In addition, the molecular mechanisms potentially involved in this regulation process will be covered. Finally the role of neuro-vascular coupling and its potential application in the diagnosis and follow up in neuro-degenerative diseases will be discussed.

EVER-Acta Lecture by Russell FOSTER*Introduction by Einar STEFANSSON***Acta
Ophthalmologica****Regulating the body clock – The unrecognised role of the eye***FOSTER R - Oxford***Summary:**

Little more than a decade ago discussion that the eye might contain another photoreceptor, different from the rods and cones, generated either polite amusement or a hostile rebuttal. The dogma was that all light detection took place by these photoreceptors whilst the other cells of the retina act only to process visual signals. However, several lines of research led to the discovery that the vertebrate eye, including humans, contains another class of photoreceptor based upon a small number of photosensitive retinal ganglion cells (pRGCs). These specialised neurons detect environmental irradiance and regulate a wide range of physiology and behaviour including the regulation of 24h body clocks, sleep, alertness, mood and even pupil size. Furthermore, the pRGCs have been shown to utilize a novel light signalling pathway based upon the photopigment melanopsin. Collectively these findings have transformed our understanding of how the eye detects light and are redefining our assessment, treatment and care of individuals with eye disease. The discovery and current understanding of this "third" class of ocular photoreceptor will be reviewed in this presentation.

**Award presentation****Biography Russell FOSTER:**

Russell is Professor of Circadian Neuroscience at the University of Oxford, Chair of the Nuffield Laboratory of Ophthalmology, Director of the Sleep and Circadian Neuroscience Institute (SCNi), Fellow of Brasenose College and was elected to the Royal Society in 2008 and the Academy of Medical Sciences in 2013. His research considers the mechanisms that regulate and generate circadian rhythms and sleep; and what happens when these systems are disrupted in brain disease. He has over 180 publications and co-authored "Rhythms of Life"; "Seasons of Life" and most recently "Sleep a very short introduction" for OUP. He is Chair of the Cheltenham Science Festival; Member of Council for BBSRC; Member of the Governing Council, The Sainsbury-Wellcome Centre; In March 2012 he was awarded BBSRC Social Innovator of the Year.

G: Lifetime risk of blindness from glaucoma

With the growing older population, the number of patients diagnosed and monitored with glaucoma is increasing. These patients are set to have lifelong ophthalmology care, but just what is their risk of blindness once diagnosed and are we managing our patients appropriately with respect to their risk? This SIS will tackle some of these questions and encourage a discussion on whether we need to reassess our management strategies for this group of patients.

IM: Inflammation in diabetic retinopathy-part 1

Diabetic retinopathy (DR) is the commonest microvascular complication of diabetes and remains one of the leading causes of blindness worldwide. The two most important visual complications of DR are diabetic macular edema and proliferative diabetic retinopathy. Many of the molecular and functional changes that are characteristic of inflammation have been detected in retinas from diabetic animals or humans, and in retinal cells under diabetic conditions. A large body of evidence supports the role of proinflammatory cytokines, chemokines, matrix metalloproteinases and other inflammatory mediators in pathogenesis of diabetic retinopathy leading to persistent low grade inflammation, and influx of leukocytes contributing to damage to the retinal vasculature and neovascularization. The causal relationship between inflammation and angiogenesis is now widely accepted. An emerging issue in diabetic retinopathy research is the focus on the mechanistic link between activation of subclinical inflammation and angiogenesis. Leukostasis has been found to be significantly increased in retinas of diabetic animals and might contribute to the capillary nonperfusion in diabetic retinopathy. Leukostasis has been postulated to be a factor in death of endothelial cells and breakdown of the blood-retinal barrier. Leukocyte recruitment and adhesion to the retinal vasculature correlate with increased expression of retinal intercellular adhesion molecule-1 and elevated expression of the β -integrin subunit CD18 on neutrophils. In addition, the increased expression of many inflammatory proteins are regulated at the level of gene transcription through the activation of proinflammatory transcription factors such as NF- κ B.

MBGE: Mitochondrial optic neuropathies - classical disease and novel manifestation

A decline in mitochondrial function plays a role in the ageing process and increases the incidence of age-related disorders. A better understanding of mitochondrial function, including dynamics, is revealing that functional and structural changes in mitochondrial morphology are important factors in diseases of ageing in the eye and visual system. Key proteins have been discovered which control the balance of mitochondrial fusion and fission and have a range of other functions, such as controlling maintenance of mitochondrial DNA, cell death, autophagy, mitochondrial metabolism and redox signalling. This SIS will explore clinical aspects of mitochondrial optic neuropathy.

ACB: Inflammation, wound healing and tear proteomics

Ocular surfaces are delicate structures of the anterior segment of the eye protected, nourished and lubricated by tear fluid. The system has its own regulatory mechanisms. Ocular surfaces are exposed environmental factors, topical ophthalmic drugs and affected by various ocular and systemic diseases. Inflammation and wound healing are vital processes involved in the defense mechanisms of the human body and pathogenesis of many eye diseases. It is also one of the most important factors in many ocular surgeries e.g. corneal, refractive and glaucoma surgery. It consists of many overlapping processes like inflammation, fibroblast activation, ECM production and remodeling of the ECM and there are many mechanisms and mediators involved in it. Tear proteomics is a powerful tool to diagnose and detect mechanisms and druggable targets of the ophthalmic and systemic diseases. SIS is focusing in the proteomics and biomarkers of the tears and anterior surface of the eye in relation these diseases.

Ophthalmic Research Lecture

Introduction by Bart LEROY

Ophthalmic
Research

Degenerative myopia and its treatment

WIEDEMANN P - Leipzig

Summary:

High myopes are handicapped by visual impairment and degenerative complications eventually leading to blindness. Myopic refraction can be corrected by refractive lens exchange. Retinal detachment may be the consequence and a possible prevention by vitrectomy will be discussed. However, the fundamental problems of degenerative myopia, the features of myopic fundus disease and the posterior staphyloma cannot be treated. Scleral cross linking possibly stiffens the sclera. By this means we could stop eye growth and possibly reduce myopic complications. Experiments to stop eye growth by scleral crosslinking will be presented.

Award presentation

Biography Peter WIEDEMANN:

Peter Wiedemann is a specialist in medical and surgical retina and head of the Department of Ophthalmology at Leipzig University, Germany.

He studied medicine in Bochum, Rennes, Stanford, and Erlangen. Then he spent 4 years in pharmacology. At the Doheny Eye Institute in Los Angeles he worked with Stephen J. Ryan. Stephen J. Ryan and K. Heimann, who later became his teacher at the University of Cologne, were his mentors. Along with his clinical work in Leipzig, he continued his research work in the field of macular degeneration, diabetic retinopathy and proliferative vitreoretinopathy (PVR). He is co editor of Ryan's RETINA.

He was President of the Saxonian Ophthalmological Society (1994, 1999, 2005, 2008 and 2012), President of the German Ophthalmological Society (2009) and member of the Club Jules Gonin Executive Committee (2000–2006). He was the Scientific Program Chair for the World Ophthalmology Congress (WOC 2012 and 2014). He is a member of the German Academy of Sciences Leopoldina, Secretary-General of the Academia Ophthalmologica Internationalis, member of the European Academy of Ophthalmology and treasurer of the ICO (International Council of Ophthalmology).

G: Does glaucoma affect only retinal ganglion cells in the retina?

The progressive loss of RGCs, and their axons, with concomitant insidious defects in the visual field, as well as changes in the optic disc, has been the classic hallmark of the glaucomatous optic neuropathies (GON). This concept however, has evolved and it is now well established that GON involve not only the RGC population, the nerve fiber layer of the retina, the optic disc and optic nerve head, but also the main retinorecipient subcortical and cortical nuclei of the primary visual pathway, such as the lateral geniculate nucleus and primary and secondary visual areas of the cortex. In addition, several groups have documented important molecular, functional and structural changes in the outer retinal layers of the retina in human glaucoma studies, as well as in non-human primate and rodent models of glaucoma or ocular hypertension. Thus, the concept of glaucoma as a solely disease of the retina and optic nerve has evolved to broader implications of the primary visual pathway. The Symposium will present studies focussing on changes in the non-retinal ganglion cell layers of the retina and will provide ample opportunity for interaction among scientists attending the conferences.

NSPH: The role of the corpus callosum in binocularity and strabismus

The role of the corpus callosum in binocularity and strabismus In placental mammals there seems to be an important role for the corpus callosum in binocularity. The corpus callosum represents the midline. In order to perceive a smooth sensory fusion of the right and the left body parts, the middle is represented on both sides. The same holds true for vision. To be able to fuse the right and left visual field, the retina contains both crossed and uncrossed ganglion cells. A small strip in the middle of the visual field is seen by both the right and the left visual cortex. The corpus callosum is likely involved in human binocular motor fusion and disparity detection. In mammals like rats, binocularity almost completely depends on callosal transfer. Binocularity of the visual cortex is realized by both the signal of the contralateral eye through the geniculate pathway, and the signal from the ipsilateral eye through the contralateral geniculate and back through the corpus callosum. Transection of crossing ganglion cells in the cat chiasm does not change disparity detection of the cortex much. Animal and human data regarding the role of the corpus callosum in binocularity and strabismus are presented.

**MBGE: Mitochondrial optic neuropathies - disease mechanisms and therapeutic strategies**

Primary inherited optic neuropathies are a group of blinding genetic disorders in which optic atrophy secondary to loss of retinal ganglion cells is a clinical key feature. The commonest causes world-wide is mutation in mitochondrial DNA (causing Leber's Hereditary Optic Neuropathy) and OPA1 mutations (causing Autosomal Dominant Optic Atrophy: ADOA). 60-80% of patients with autosomal dominant optic atrophy have mutations in the OPA1 gene. Inherited optic neuropathy is an 'orphan' disease. However, the disease prevalence is not so low (1: 20,000 to 35,000), and it is estimated that there are 5000 to 8000 distinct rare diseases, affecting 6-8% of the population of the European Union (27-36 million people). Recent trials of the drug idebenone, a co-enzyme Q10 analogue, in patients with the mitochondrial optic neuropathy, Leber's hereditary optic neuropathy, have shown the first glimmer of hope for the treatment of this group of patients. At this exciting time this SIS will focus on disease mechanisms and potential avenues towards therapy.

ACB: New wine in new tubes - The re-advancement of scleral lenses in ocular surface disease

Even though the scleral "contact lens" - a precorneal lens with very large diameter that rests on the sclera and safely covers the cornea via a tear-filled vault zone - was the originally invented type of a contact lens it has rapidly lost the interests of eye doctors and patients after the advent of small diameter corneal lenses and eventually after the invention of soft contact lenses. Still, the large scleral lenses have certain advantages since they can safely bathe the cornea in a moist chamber that allows a surprising improvement and healing of chronic pathological processes at the ocular surface. Scleral lenses can often be the only possible way to restore acceptable or even perfect vision in corneas with higher order refractive disorders and/or keratokonus. Therefore scleral lenses can often preserve or restore vision without "needing a knife" - which may be an important advantage not only in countries with a less developed health system. In recent years new lens designs and high tech materials have distinctly improved the fitting as well as the wearing of scleral lenses. To some surprise, patients often consider, after an adaption phase, a scleral lens as that type of contact lens that is causing the least ocular irritation as compared to other contact lens types.

Coffee with the Prof

In an initiative to encourage dialogue amongst speakers and EVER members, we have launched a 45 minute session called "Coffee with the Prof." This will be a table of 6-8 "guests" at a table headed by one of the EVER speakers. The idea is to provide a casual yet personal venue where colleagues, in particular the younger faction, can share comments and ideas with an expert.

The Profs are:

- Pinar AYDIN
- Russell FOSTER
- Reza DANA
- Constantin POURNARAS
- Peter WIEDEMANN
- Marcela VOTRUBA
- Bart LEROY

Registration required and will open onsite at registration. First come first served.

RV: Diabetic retinopathy and macular edema

The pathogenesis of diabetic retinopathy and macular edema will be detailed. Speakers will present diabetic classification and the interest for screening and follow-up of our patients. Macular complications will be detailed as well as the different therapeutic options. Clinical cases of diabetic retinopathy with or without diabetic macular edema will be discussed with the audience. These cases will define the role and the pros and cons of different therapeutic options.

16:00 - 17:30 | GALLIENI 1+2

NSPH: Nystagmus and non-nystagmic abnormal spontaneous eye movements**Intermediate**

This course is intended for beginners and intermediate levels. A patient presenting with spontaneous abnormal eye movements can be challenging to the clinician. Interruption of fixation can result from many types of nystagmus and non-nystagmic spontaneous abnormal eye movements. Being able to identify the various mechanisms and etiologies of disorders which can interrupt the stability of fixation is mandatory. This course aims at providing participants with a structured approach to identify correctly the most frequent and important types of spontaneous abnormal eye movements and will consist of five sections:

1. Review of the anatomical and physiological bases of stability of gaze;
2. Congenital forms of nystagmus;
3. Acquired forms of nystagmus not to be missed;
4. Alterations of stabilization of the eyes under dynamic conditions;
5. Abnormal non nystagmic spontaneous eye movements. At the end of this course participants should have acquired a systematic and practical approach to the patient with abnormal spontaneous eye movements.

BORRUAT FX , KAESER P

2561	16:00	Review of the anatomical and physiological bases of stability of gaze <i>BORRUAT FX - Lausanne</i>

17:30 - 19:00 | RHODES 1

G: Neuroprotection in glaucoma: Coming of age?

Neuroprotection has been around for a while in glaucoma - or so it seems. Following a lull in enthusiasm, there appears more optimism in the glaucoma community. In practice, early detection and treatment is likely to be essential to protect the visual system against insults and prevent progression. This future scenario will be realised once sufficiently powered clinical trials with well chosen endpoints demonstrate benefits in terms of visual function or on validated surrogate endpoints of visual function. This session will review where we are and discuss new trial designs, new endpoints and new agents and review what lessons may have been learnt from before. Although confirmation of neuroprotective effects by randomized clinical trials is needed, there is demonstration of positive non-IOP dependent effects, which may be utilized in future trials.

17:30 - 19:00 | RHODES 2

COS: Corneal imaging

In the recent years significant advances in corneal imaging were obtained. The current SIS first provides an overview of currently available techniques for corneal imaging. The other three talks are related to recent innovations in the field. Optical coherence tomography (OCT) has now become a standard procedure for imaging ocular tissues. Using broadband light source unprecedented resolution can be achieved allowing to visualize many structures within the cornea including the pre- corneal tear film. Confocal *in vivo* microscopy is a technique which provides excellent resolution although the field of view is small. The technique has been used to visualize many details of the cornea including endothelial cells and provides the unique opportunity to study corneal nerves. Finally recent advances in assessing corneal endothelial cells are provided. This includes *ex vivo* assessment of endothelial cell viability, 3D end cell count for eye banks and HD 3D imaging of cells with endothelial markers.

2634	18:36	Recent advantages in the imaging of human corneal endothelial cells <i>THURET G - Saint Etienne</i>

17:30 - 19:00 | RHODES 3

PO: It is a masquerade! Eye cancers lurking behind innocent appearances

Eye cancer is rare as compared to most benign eye diseases. This is a diagnostic challenge in general, especially in the office of the comprehensive ophthalmologist. It becomes a particular dilemma when a malignancy takes the disguise of another eye disease, in regard to symptoms or signs, and essentially becomes its look-a-like. Such a situation is known as a masquerade syndrome, and certain eye cancers are especially prone to produce one. This symposium highlights the most common situations in which an eye cancer lurks behind an innocent appearance, hopefully helping the audience to get their diagnosis right on the first visit of their next masquerade patient.

NSPH: An update on aniridia

Aniridia is a panocular disease. This rare bilateral ocular disorder occurs at a frequency of approximately 1 in 80 000. About one third of these aniridia are sporadic, with many variable expressivities of the features. PAX6 gene anomalies with 11p13 mutations or deletion are involved in aniridia. PAX6 mutations result in alterations in corneal cytokeratin expression, cell adhesion and glycoconjugate expression. Syndromic manifestations in aniridia patients with PAX6 point mutations will be described. Ocular anomalies in aniridia commonly associates limbal insufficiency, cataract, glaucoma, foveal aplasia with nystagmus and ptosis. Potential mechanism of limbal stem cell insufficiency will be exposed. Physiopathology of cornea fate or PAX6 and corneal homeostasis will be exposed. Innovation with therapeutic options will be discussed as medical treatment, limbal stem cell transplant technology or pluripotent stem cells.

ACB: RPE Transplantation. From lab to the clinic

Retinal pigment epithelial (RPE) cells have a critical role in the pathogenesis of many common retinal diseases. Therefore they have been regarded as important tools for the replacement therapy. The rapid technological development in the regenerative medicine has made RPE transplantations a clinically relevant option to treat retinal diseases in the future. This RPE SIS will focus in the critical topics of the development of this technology from laboratories to the clinics like differentiation of the RPE cells from hESC and iPSC, regulatory and clinical aspects like required biomaterial scaffolds, surgical techniques and safety issues.

RV: Degenerative myopia

Intermediate

Myopic disease can lead to severe visual impairment. This course aims to describe epidemiology of myopia and the recent genetic markers related to high myopia. Then macular complications, either medical or surgical, will be presented. Characteristics of retinal detachment linked to myopia will be considered. Finally, clinical cases will overview the different presentations of visual impairment in high myopic eyes.

G: Autonomic dysfunction in glaucoma

The known mechanisms behind glaucomatous damage have extended beyond intraocular pressure (IOP) to include those related to an underlying vascular dysfunction. One of the possible explanation for this vascular dysfunction is an impairment of the autonomic nervous system (ANS). This nervous structure is of paramount importance in regulating overall visceral activity and promoting that the proper response to a specific stimulus exists. Accordingly, a number of validated tests exist to determine whether an ANS dysfunction exists and to what extent. As glaucoma patients have been reported to exhibit both ocular and systemic signs of ANS dysfunction, this information may be of value to glaucoma management. This information could potentially be of use in early diagnosis, diagnostic confirmation and as prognostic value, particularly in patients where disease is progressing with an otherwise normal range IOP.

COS: Comprehensive lamellar keratoplasty

Endothelial keratoplasty is the mainstay in the management of corneal pathology leading to endothelial decompensation. Different techniques and modifications have evolved and the process is on-going. In this SIS we cover the full range of the procedures available supported by published evidence, so that the surgeon can understand the pros and cons of each technique and choose the one best suited for the patient and clinical indication. This will include Descemet's stripping endothelial keratoplasty (DSEK) and ultrathin DSEK; Descemet's membrane endothelial keratoplasty (DMEK) and Pre-Descemet's endothelial keratoplasty (PDEK). The outcomes of each will be discussed and compared in the context of the learning curve, eye banking considerations regarding donor tissue required for each and post-operative issues related to graft detachment. The role of penetrating keratoplasty (PK) in modern day corneal transplantation and the strategies for enhancing graft survival will be covered as PK is performed more and more in cases with greater risk of failure. All speakers have been instructed to make their talk well illustrated; evidence based and cover practical applications supported by sound basic and clinical science.

8:30 - 10:00 | RHODES 3

PO: Eyelid tumors**Intermediate**

Eyelid problems range from benign, to malignant. Fortunately, most eyelid disorders are not vision-threatening or life-threatening. Recognition and diagnosis of these problems are crucial to their proper management. For example, malignant eyelid tumors may be associated with lash loss and erosion of normal eyelid structures. Traditional surgical treatment of non-melanoma skin cancer includes excision with subsequent surgical margins, the "security" margins leading to determine the theoretical level of recurrences. Thus, some authors favor a clinical excision margin of 4 mm for basal cell carcinoma and 6 mm for squamous cell carcinoma. However, such "security" margins could not be applied in all cases of eyelid tumors for anatomic and functional considerations because such recommendations may lead to severe ocular complications. Thus the best assurance of minimal excision with complete excision is obtained by extemporaneous examination of the resection margins by frozen section or by surgery in two times. Knowledge of basis of reconstruction is important for avoid complications.

NSPH: GOA Symposium : Tears in allergy: update

Allergic ocular surface diseases affect subjects of all ages and increased all over the world with evolution of environment. These pathologies could lead to ulcers and sight-threatening corneal complications. Identification of inflammatory mediators in the tear fluid have been studied for a better understanding of the immune mechanisms involved in the ocular surface inflammation. Quantitative and qualitative characterization of the peptidoma of human tears will be developed and detailed in specific allergic keratoconjunctivitis as vernal keratoconjunctivitis. A possible disease marker may lead to identification of potential targets for therapeutic interventions. An update on severe ocular allergic disease and their treatment with current options will be reviewed with practical aspects and diverse clinical cases considering quality of life of the children and adults.

Keynote Lecture by Reza DANA

Introduction by Thomas FUCHSLUGER

Translational applications in corneal and ocular surface diseases

DANA R - Boston MA

Summary

The field of Cornea and Ocular Surface has made significant advances in the recent past. Compared to our colleagues in Retina and Glaucoma where the principal leaps forward have been in pharmaco-therapy, in Cornea our primary advances have been in the realm of microsurgery and new technologies (e.g., DSEK/DMEK, femtosecond). Nevertheless, significant work has also been done in understanding the pathophysiology of common corneal and ocular surface disorders, with translational applications in our clinics. This talk will provide a short summary of some of the translational research performed by our team in understanding the pathogenic mechanisms and novel treatment options for corneal neovascularization, graft-versus-host disease (GVHD), and dry eye syndrome

Award of the EVER Certificate of Honour

Biography Reza Dana:

Dr. Reza Dana, Senior Scientist, W Clement Stone Scholar, The Schepens Eye Research Institute; Claes Dohlman Chair in Ophthalmology, Professor of Ophthalmology at Harvard Medical School; Director, Cornea & Refractive Surgery, Massachusetts Eye & Ear Infirmary; Vice Chairman of Harvard Department of Ophthalmology and Director of the Harvard Medical School Cornea Center of Excellence. Dr. Dana completed his bachelor's, graduate, and medical education at Johns Hopkins and performed his residency at the Illinois Eye and Ear Infirmary, followed by fellowships in Cornea and External Diseases at the Wills Eye Hospital, in Uveitis at the Massachusetts Eye and Ear, and in Ocular and Transplantation Immunology at The Schepens Eye Research Institute, Harvard Medical School. Dr. Dana, a 'Gold Fellow' of the Association for Research in Vision and Ophthalmology (ARVO), has authored over 230 peer-reviewed articles and over 100 reviews and book chapters, and has delivered more than 200 invited and named lectures worldwide. He has been the recipient of multiple awards, including the Special Scholar Award, Physician-Scientist Award, Lew R. Wasserman Award, and the Senior Scientific Investigator Award from Research to Prevent Blindness, the Cogan Award from ARVO, the LSU Chancellor's Award in Neuroscience and Ophthalmology, and the Alcon Research Institute Award. Dr. Dana is Associate Editor of IOVS, and is on the editorial board of the journals Cornea and The Ocular Surface. In addition to his basic laboratory investigations, Dr. Dana leads a large translational research program at Mass. Eye and Ear that has received a number of IND permits from the FDA in just the last few years. Apart from his many clinical trainees, Dr. Dana has trained over 90 fellows and students from 30 countries in his laboratory to date.

Dr. Dana's principal research interests are in determining the molecular and cellular regulation of ocular immunity. The aims of Dr. Dana's research program are to (1) unravel the molecular and cellular processes that are responsible for initiating and sustaining immuno-inflammatory responses in the cornea and anterior segment, and thereby (2) develop specific molecular targeting strategies to promote mechanisms that engender immune unresponsiveness without placing the eye or the patient at risk of toxicity or secondary infections. Areas of investigation include transplantation, angiogenesis, stem cells, and dry eye disease. Dr. Dana's research is supported by several federal grants.

11:00 - 12:30 | HERMES

RV: Lessons taught by imaging about atrophy in retinal disease

A large number of imaging technics are at our disposal since ten years or so. The progressive mastery of fundus autofluorescence clearly helped the differential diagnosis, separating atrophy resulting from heredo degeneration from that resulting age related degeneration. ICG angiography did improve our knowledge in discerning specific features of choriocapillaris atrophy or Haller layer atrophy. OCT and even more en face OCT provided us with additional information on the initial site of dysfunction in showing the morphology of the different retinal layers. The last to arrive in the clinic Angio OCT promises to complete the clinical aspect of the tissue alterations and the respective role of different vascular layers. The advent of Adaptive Optics opens new avenues in our understanding of the pathogenesis of atrophy and provides the possibility to use biological markers. In addition, the emerging approaches may allow to identify new diseases. The increase of knowledge obtained with all the means used in the daily life will be presented by the teams with most expertise in each field. The confrontation of all informations obtained may result in the identification of reliable prognostic markers for evaluation of clinical trial results.

G: Drug delivery and the eye

Effective delivery of drugs for the treatment of ocular disorders is a challenge. Many potential active agents fail to progress because of not reaching their target. The unique anatomical and physiological barriers of the eye restrict the passage of drugs to the back of the eye, including . the corneal epithelium, the blood-retinal barrier, systemic absorption, and drainage through the nasolacrimal ducts. The only mode of delivery currently for anti-VEGF treatments is through intravitreal delivery. These injections have put a strain on health service providers around the world. However, nanotechnology and small molecule advances mean that potentially intraocular injections may be a thing of the past. A different problem is encountered in glaucoma where often it is the task of daily eye-drop instillation that is associated with poor compliance. Again, advances in sustained release delivery promise to be potentially very useful.

EOVS: Doctor, I can't see, but you can't see why (Medically unexplained visual loss)

The SIS will address the challenging clinical problem of Medically Unexplained Visual Loss (MUVL). The content of the SIS will address the Initial Consultation, pointing out those elements of the routine clinical examination that require particular attention and how to attempt the distinction between non- organic and organic visual loss. The potential retinal and neuro-ophthalmic causes of MUVL will be discussed by an ophthalmologist and neurologist respectively, paying particular attention to disorders that may be mistaken for non-organic visual loss. Finally, the role of electrophysiology in providing objective assessment of visual pathway function, both retinal and intracranial, will be addressed using a case-based approach.

MBGE: Ionizing radiation and cataract

The ocular lens is recognized as one of the most radio-sensitive tissues in the human body and cataracts are known to be initiated by exposures to relatively low doses of ionizing radiation. Recent new work on survivors of the Hiroshima atomic bomb and the Chernobyl atomic power plant together with epidemiological work on radiation technologists suggests that the question of the threshold dose for cataract development is open again. We will discuss recent findings on human cataracts together with mouse models.

NSPH: An ophthalmological look at history

Studying history of ophthalmology we acknowledge the past of our profession, but also better understand the origins of our present knowledge. We can also often analyze the process of scientific discoveries and the progress in medical sciences. The eye has been often used in art as a symbol of the most delicate and important organ of human body, sometimes as a window to the soul. During the session unknown early descriptions of retinopathy in onchocerciasis, and military ophthalmia during the Napoleonic campaign will be presented. Moreover, obsession of the eyes in Luis Buñuel's work and the biography of Friedrich Wegener will be discussed.

G: The Obergurgl optic nerve conference 2014: neuroinflammation

The optic nerve conference in Obergurgl, which is supported by EVER, explores the current state of our understanding of optic nerve degeneration, such as in glaucoma. To stimulate ideas and discussion, leading experts from a variety of fields will emphasize a cross-sectional, interdisciplinary approach. The conference brings together clinicians and basic scientists from different fields and will highlight translational research providing a platform for networking and stimulating discussions. The Focus area 2014 of the Obergurgl conference was "Neuroinflammation". In this SIG, some of the topics of the Obergurgl conference will be presented at EVER. Jonathan Crowston, Franz Grus, Keith Martin Conference Organizers, Obergurgl Optic Nerve Conference

MBGE: Cataract genetics

Cataracts are a major disorder at the eye. It becomes evident that at least in developed countries genetic congenital cataracts are due to mutations either present in a family over generations or appearing de novo in the germ line; recessive mutations become obvious in regions with a larger portion of consanguinity. In this SIS we will discuss recent findings on novel cataract-causing genes in humans and mice. Moreover, we will discuss also the advantage of next-generation sequencing in disease-specific applications.

Section Business Meetings

- ACB Gallieni 5
- COS Rhodes 2
- EOVS Rhodes 1
- G Rhodes 1
- IM Rhodes 4
- LC Hermes
- MBGE Gallieni 1 & 2
- NSHP Rhodes 2
- PO Rhodes 3
- PBP Rhodes 3
- RV Hermes

Agenda

1. Report of the chair of section
2. Report of the programme secretary
3. Next year's meeting:
 - nomination of the 2016 section programme secretary (different from the section chair)
 - proposals of 2016 Special Interest Symposia (SIS)
 - proposals of 2016 Courses
 - proposals for 2017 Keynote speakers
4. Comment on the EVER activities
5. Other business

In addition to the agenda, the sections IM and PBP will nominate at least 2 candidates for section chair 2016-2021.

16:20 - 17:50 | HERMES

RV: Vitreoretinal macular interface in various macular pathologies

Vitreoretinal macular interface disorders are of great intérêt since the introduction of vitreolysis as an alternative to surgical approach. Their association to différent macular pathologies Will be discussed separately, as idiopathic condition, diabetis, venous occlusions and High myopia.

POURNARAS JA , LE MERY

- 3511** 16:20 Evaluation of the vitreoretinal interface
GUALINO V - Montauban

- 3512 *** 16:38 Vitreoretinal traction syndrome
LE MERY - Paris

- 3513** 16:56 Diabetic maculopathy
POURNARAS JA - Lausanne

- 3514** 17:14 Venous occlusions
PAQUES M - Paris

- 3515** 17:32 High myopia
STANGOS A - Geneva

16:20 - 17:50 | RHODES 1

G: Healthcare delivery - The traditional role of the doctor is changing

Financial restrictions in healthcare delivery, imposed by the economical and social factors, leads inevitably to innovation in the organization of the care. The professionals should perform more efficiently, less expensive and overcome the challenges of maintaining the quality of care. There is a trend for disruptions of healthcare professions, as specialists concentrate on curing the most complex and sickest patients, the "less-skilled" practitioners could take on more complex role (Christensen C, Harvard Business Review, 2000). Our SIS concentrates on "Lean management", "disruptive innovations in healthcare" and "patient-centeredness". The lecture of the first speaker, the CEO (non-medical professional)of the University Hospitals in Brussels concentrates on the challenges that a university hospitals encounters because of the governmental restrictions. The medical professionals explain the changing role of the specialists. Very interesting SIS to attend which gives new insights of organization of the healthcare for the professionals.

POURJAVAN S , KOTECHA A

- 3521** 16:20 Healthcare delivery, not just about the doctor and the patient
MAZY R - Bruxelles

- 3522** 16:38 The evolving role of nurses and allied health professionals in the management of age-related macula degeneration
HAMILTON R , Mapani A , DaCosta J , Pavesio C , Flanagan D - London

- 3523** 16:56 Optometrists and the management of glaucoma; the Rotterdam experience
LEMIJ H - Rotterdam

- 3524** 17:14 Can ophthalmic technicians be used to deliver glaucoma care?
KOTECHA A - London

- 3525** 17:32 Patient-focused glaucoma care delivery, maintaing quality despite cost limitation
POURJAVAN S - Brussels

16:20 - 17:50 | RHODES 2

COS: Immune regulation in cornea and ocular surface

This session will present new insights into the role of immune Regulation on physiology and pathology of cornea and ocular surface.

DANA R , SABAN D

3531	16:20	Corneal nerves maintain the immune privilege of the cornea <i>HAMRAH P - Wellesley</i>
3532	16:38	Immune Responses at the Ocular Surface <i>SABAN D R - Durham</i>
3533	16:56	Immunomodulation in allergic eye disease <i>CALDER V - London</i>
3534 *	17:14	Tregs in corneal health and disease <i>DANA R - Boston MA</i>
3535	17:32	The Role of Antigen Presenting Cells in the Pathophysiology of Dry Eye <i>STERN M E - Irvine</i>

16:20 - 17:50 | RHODES 3

PO: Ocular lymphomas

Lymphoproliferative diseases may affect the eye and the adnexae under two main patterns: on the one hand, high-grade, B-cell lymphomas affecting the vitreous, retina and central nervous system, and low-grade, 'MALT' lymphomas affecting the orbit and palpebral tissue on the other. The scope of this SIS is to bring together pathologists, clinical haematologists, orbital and retino-vitreal surgeons to focus on the histological, clinical, surgical and medical issues of ocular lymphomas in 2015.

ROBERT PY , COUPLAND S

16:20 - 17:50 | RHODES 4

LC: Oxidation and defense in the ocular lens

First, experimental evidence for apoptosis in the lens after in vivo oxidative stress will be presented. Then, the spatial distribution of active caspase-3 in the lens and its response to in vivo oxidative stress after exposure to UVR will be reviewed. Subsequently, response in the immunoproteasome in human lens epithelial cells during oxidative stress will be reviewed. Thereafter, the role of estrogen as an antioxidant in the lens will be presented based on experimental and clinical data. Finally, evidence for protection against in vivo oxidative stress with the extrinsic antioxidant caffeine will be presented.

SÖDERBERG P , ZETTERBERG M

3551	16:20	Apoptosis in the lens after oxidative stress induced by in vivo exposure to UVR <i>GALICHANIN K - Stockholm</i>
3552	16:38	Active caspase-3 in the lens and its response to oxidative stress induced by in vivo exposure to UVR <i>TALEBIZADEH N - Uppsala</i>
3553	16:56	The immunoproteasome in human lens epithelial cells during oxidative stress <i>PETERSEN A , Zetterberg M - Göteborg</i>
3554	17:14	Estrogen as an antioxidant in the lens <i>ZETTERBERG M - Mölndal</i>
3555	17:32	Caffeine, an in vivo oxidation protectant in the lens <i>KRONSCHLAGER M , Yu Z , Talebizadeh N , Söderberg P - Freiburg</i>

16:20 - 17:50 | GALLIENI 1+2

MBGE: Identification of novel mouse models for hereditary eye disorders

The mouse is one of the most frequently used models for genetic eye diseases. Therefore, it is of particular importance to have standardized phenotyping procedures allowing a fast and reliable diagnosis of genetic defects affecting the eye. Therefore, several mouse phenotyping centers have been established and are coordinated on an international level (International Mouse Phenotyping Consortium -IMPC; <http://www.mousephenotype.org/>). In Europe, four mouse clinics (Munich, Strasbourg, Harwell and Cambridge) exist and are screening for eye disorders. We would like to discuss the different strategies to identify as many eye disorders in the mouse as possible on the most efficient way under high-throughput conditions. Moreover, selected recent findings will be reported which can be used as models for several hereditary eye disorders.

GRAW J

3561	16:20	Novel mouse phenotypes identified in the eye screen of the German Mouse Clinic <i>AMARIE OV , Fuchs H , Gailus-Durner V , Hrab de Angelis M , Graw J - Neuherberg</i>

RV: Diabetic macular edema in vitrectomized eyes

Conventional theory explains that poor visual outcomes following surgical treatment of proliferative diabetic retinopathy are the result of macular ischemia, long standing traction retinal detachment of the macula or advanced fibrovascular proliferation beyond surgical repair. In some cases, cystoid macular edema (CME) may be a prominent finding on optical coherence tomography (OCT) and may account for the observed limited visual outcomes following pars plana vitrectomy (PPV) surgery. In the present SIS, we present the spectrum of conditions where CME has been reported after PPV, the importance of imaging technology in the management of CME and will concentrate on CME post PPV surgery in diabetic patients. Pharmacokinetic data and clinical efficacy data of treatment with anti-VEGF agents and periocular and intravitreal steroids are presented for the management of CME in diabetic vitrectomized eyes.

XIROUT , ZAMBARAKJI H

Subspecialty exam and diploma in Europe: Why, when and how

The EBO has gained worldwide respect for its efforts on harmonizing education and training in general ophthalmology within Europe. The comprehensive EBO Diploma examination, organised annually since 1995, awards successful candidates the title of the Fellow of the European Board of Ophthalmology (FEBO), and is the most evident result of such efforts. More recently the EBO has established a Subspecialty European Board of Ophthalmology Diploma Examination with the goal to increase standards of knowledge and care in various subspecialties. The EBO is realising this goal by close collaboration with different European ophthalmological subspecialty societies who are actively taking part in the organization and realization of the EBO Subspecialty Examinations allowing an official and standardized evaluation and awarding of knowledge in various specialties. The first of these subspecialty examinations to be introduced is in the field of glaucoma and is developed in close collaboration with the European Glaucoma Society (EGS). The goals, the organisation and requirements to sit the subspecialty exam as well as the first experience with the FEBO-Glaucoma exam and Diploma will be presented.

RINGENS P , GRUPCHEVA H

NSPH: ABC in retina structure and function

Beginner

An understanding of the anatomy and physiology of the retina are essential in order to help in the diagnoses and treatment of various types of retinal diseases. Generally, only a limited amount of information is available in ophthalmic textbooks with the reader being unaware of more recent advances. The aim of this course is therefore to provide some more in-depth information on retinal structure and function to hopefully facilitate in an understanding in, for example, imaging diagnostic technologies like OCT and adaptive optics. Moreover, the newer available methods that include gene and stem cell treatments are aimed at preserving specific retinal cell-types and this requires knowledge related to the functional and morphological relationship between neurons, glial cells and the retinal vascular. In addition, an understanding of the relationship between retinal physiology and circadian rhythms cannot be ignored. The course should benefit clinicians, basic scientists and physiologists and will concentrate on retinal glial cells, the important relationship between photoreceptors and retinal pigment epithelial cells, the significance of ganglion melanopsin cells and the unique characteristics of the ON/OFF pathway of the retina.

Keynote Lecture by Bita ESMAELI

Introduction by Steffen HEEGAARD

**Multidisciplinary treatments for malignant eyelid tumors:
surgical and non-surgical options, sentinel lymph node biopsy,
and surveillance**

ESMAELI B - Houston, Texas

Summary

Malignant tumors of the eyelid are varied in their presentation and stage. Surgical treatments and reconstructive outcomes for each stage and histology will be reviewed. Adjuvant local treatments such as radiation therapy as well as non-surgical medical treatments will also be discussed. Indications and clinical cases where sentinel lymph node biopsy may be beneficial and other recent advances in the field will be reviewed.

Award of the EVER Certificate of Honour

Biography Bita Esmaeli:

Dr Bita Esmaeli is a Professor of Ophthalmology in the Department of Plastic Surgery at The University of Texas M. D. Anderson Cancer Center, where she has an orbital oncology and oncologic ophthalmic plastic surgery practice since 1998.

Dr Esmaeli's practice focus is surgical treatment of orbital tumors, lacrimal gland carcinomas, eyelid cancers, melanoma of eyelid and conjunctiva, and reconstructive surgery in the periocular region including lacrimal surgery.

Dr Esmaeli has authored over 160 peer-reviewed manuscripts, over 55 invited articles and book chapters, has spearheaded several clinical trials, and has participated in numerous research protocols at M. D. Anderson Cancer Center. She has received many prestigious awards and honors including the Merrill Reeh Pathology Award and the Research Award from the American Society of Ophthalmic Plastic and Reconstructive Surgery, the American Academy of Ophthalmology Senior Achievement Award, Best Doctors in America, and Top Doctors Award. Dr Esmaeli is a member of the American Ophthalmologic Society

Dr Esmaeli's research interests include molecular signature of ocular and orbital tumors, tissue banking, eye and vision-sparing treatment strategies for orbital and adnexal cancers, and ocular side effects of cancer therapy.

Dr. Esmaeli helped establish the Ophthalmology Service as a comprehensive full-time service at M. D. Anderson Cancer Center in 1998. She served as the Director of Service from 1998 to 2001 and the Chief of Ophthalmology from 2001 to 2004. She is the Program Director for an ASOPRS-sponsored fellowship in oculoplastic surgery and orbital oncology at M. D. Anderson Cancer Center.

NSPH: New approaches to the prevention of myopia

High myopia is a major cause of uncorrectable visual impairment. It imposes major challenges and costs for refractive correction and for the treatment of associated pathological complications. In the last 60 years, there has been a marked increase in the prevalence of high myopia in younger generations in developed countries in East and Southeast Asia, and there are signs of similar, but less pronounced increases in North America and Europe. In some parts of the world, 70-90% of children completing high schools are now myopic, and as many as 20% may be highly myopic. It is now clear that myopia results from excessive axial elongation of the eye and this greater rate of axial elongation appears to be environmentally driven. Experimental studies have examined the biochemical mechanisms involved in regulation of axial elongation. From these studies, some options have emerged for preventing the development of myopia or slowing myopic progression.

RV: Silicone oil (SiO)complications

The use of silicone oil (SiO) as an internal tamponade agent in cases of complex retinal detachment with proliferative vitreoretinopathy (PVR) has become common, but it also may lead to postoperative complications if it is not surgically removed later. This symposium will document the safety and effectiveness of intravitreal injections in the silicone oil-filled eye, the possible complications from the migration of emulsified silicone and, finally, it will provide a review and discussion of the surgical management of these conditions.

G: Untrabitional (sic) glaucoma surgery

For almost 50 years, trabeculectomy has been considered the 'gold standard' procedure in the surgical management of the Glaucoma patient. The operation undoubtedly works well in many surgeons' hands, and over the last 20 years small changes in surgical technique have improved the safety profile of guarded sclerostomy. 'Tube' surgery has also long been widely advocated and debate rages about which of these two mainstream treatments should be the de facto surgery for glaucoma. In a continued attempt to improve the surgical risk/benefit ratio, there have more recently been advocated other surgical glaucoma procedures, which may in time take on the mantle of 'standard of care'. Our SIS presents a selection of these new treatments as a basis for a robust discussion of why and how we offer surgery to control our patients' disease with the ultimate aim of preserving their vision as effectively and safely as possible.

Acta Ophthalmologica

Edited by: Einar Stefánsson

Why should you read the journal?

- Top class research - our impact factor now stands at 2.844*, with a ranking of 13/57 in the ISI Ophthalmology category
- Coverage that's relevant to you – encompassing all aspects of the anatomy, function and diseases of the eye
- Official publication of EVER, Dutch and all five Nordic Ophthalmological Societies

Visit www.actaophthalmologica.com for more information

EVER would like to thank all of its past and present sponsors. We would especially like to thank the following companies, many of which are our long-term supporters, for their generous sponsorship in 2015. Thanks to their kind support EVER can continue to encourage research and dissemination of knowledge concerning the eye and vision by means of meetings, publications and exchange of information.
